Plasmite™ Reticulation

The alternative solution for a cost effective and friendly to the environment termite barrier

What is Plasmite™ Reticulation?

- ❑ Plasmite™ Reticulation is a termite barrier that protects your property and your health, used as a termite defence system for your home or building
- ❑ Biodegradable, control agent application that does not rust and corrode in any environment especially when placed around slab penetrations and building perimeters providing renewable life protection to these highly vulnerable areas
- ❑ A very cost effective product that is within everybody's reach
- ❑ Long lasting protection (renewable for the life of the structure)
- ❑ Provides product warranty renewable for life of building
- ❑ Environmentally friendly
- ❑ Can be used in almost any building situation or detail
- ❑ Proven Track Record (Used in over 300,000 homes in U.S.A.)
- ❑ Meets the requirements of Australian Standards 3660.1.2000
- ❑ Complies with B.C.A. Section 1.2A
- ❑ C.S.I.R.O. Building Products Appraisal No. 319
- ❑ System fully tested by researchers including Dr John French, Dr Berhan Ahmed, University of Melbourne and Dr John Thorpe
- ❑ Installed by fully trained and insured operators
- ❑ Injected Free of Charge with annual termite inspection being carried out. (Inspection price to be industry average)

Compare **Plasmite™ Reticulation** with other barriers and see for yourself. This is a proven, no nonsense barrier.

You can use **Plasmite™ Reticulation** for your new home, extension and building construction.
